

Explicit Modules

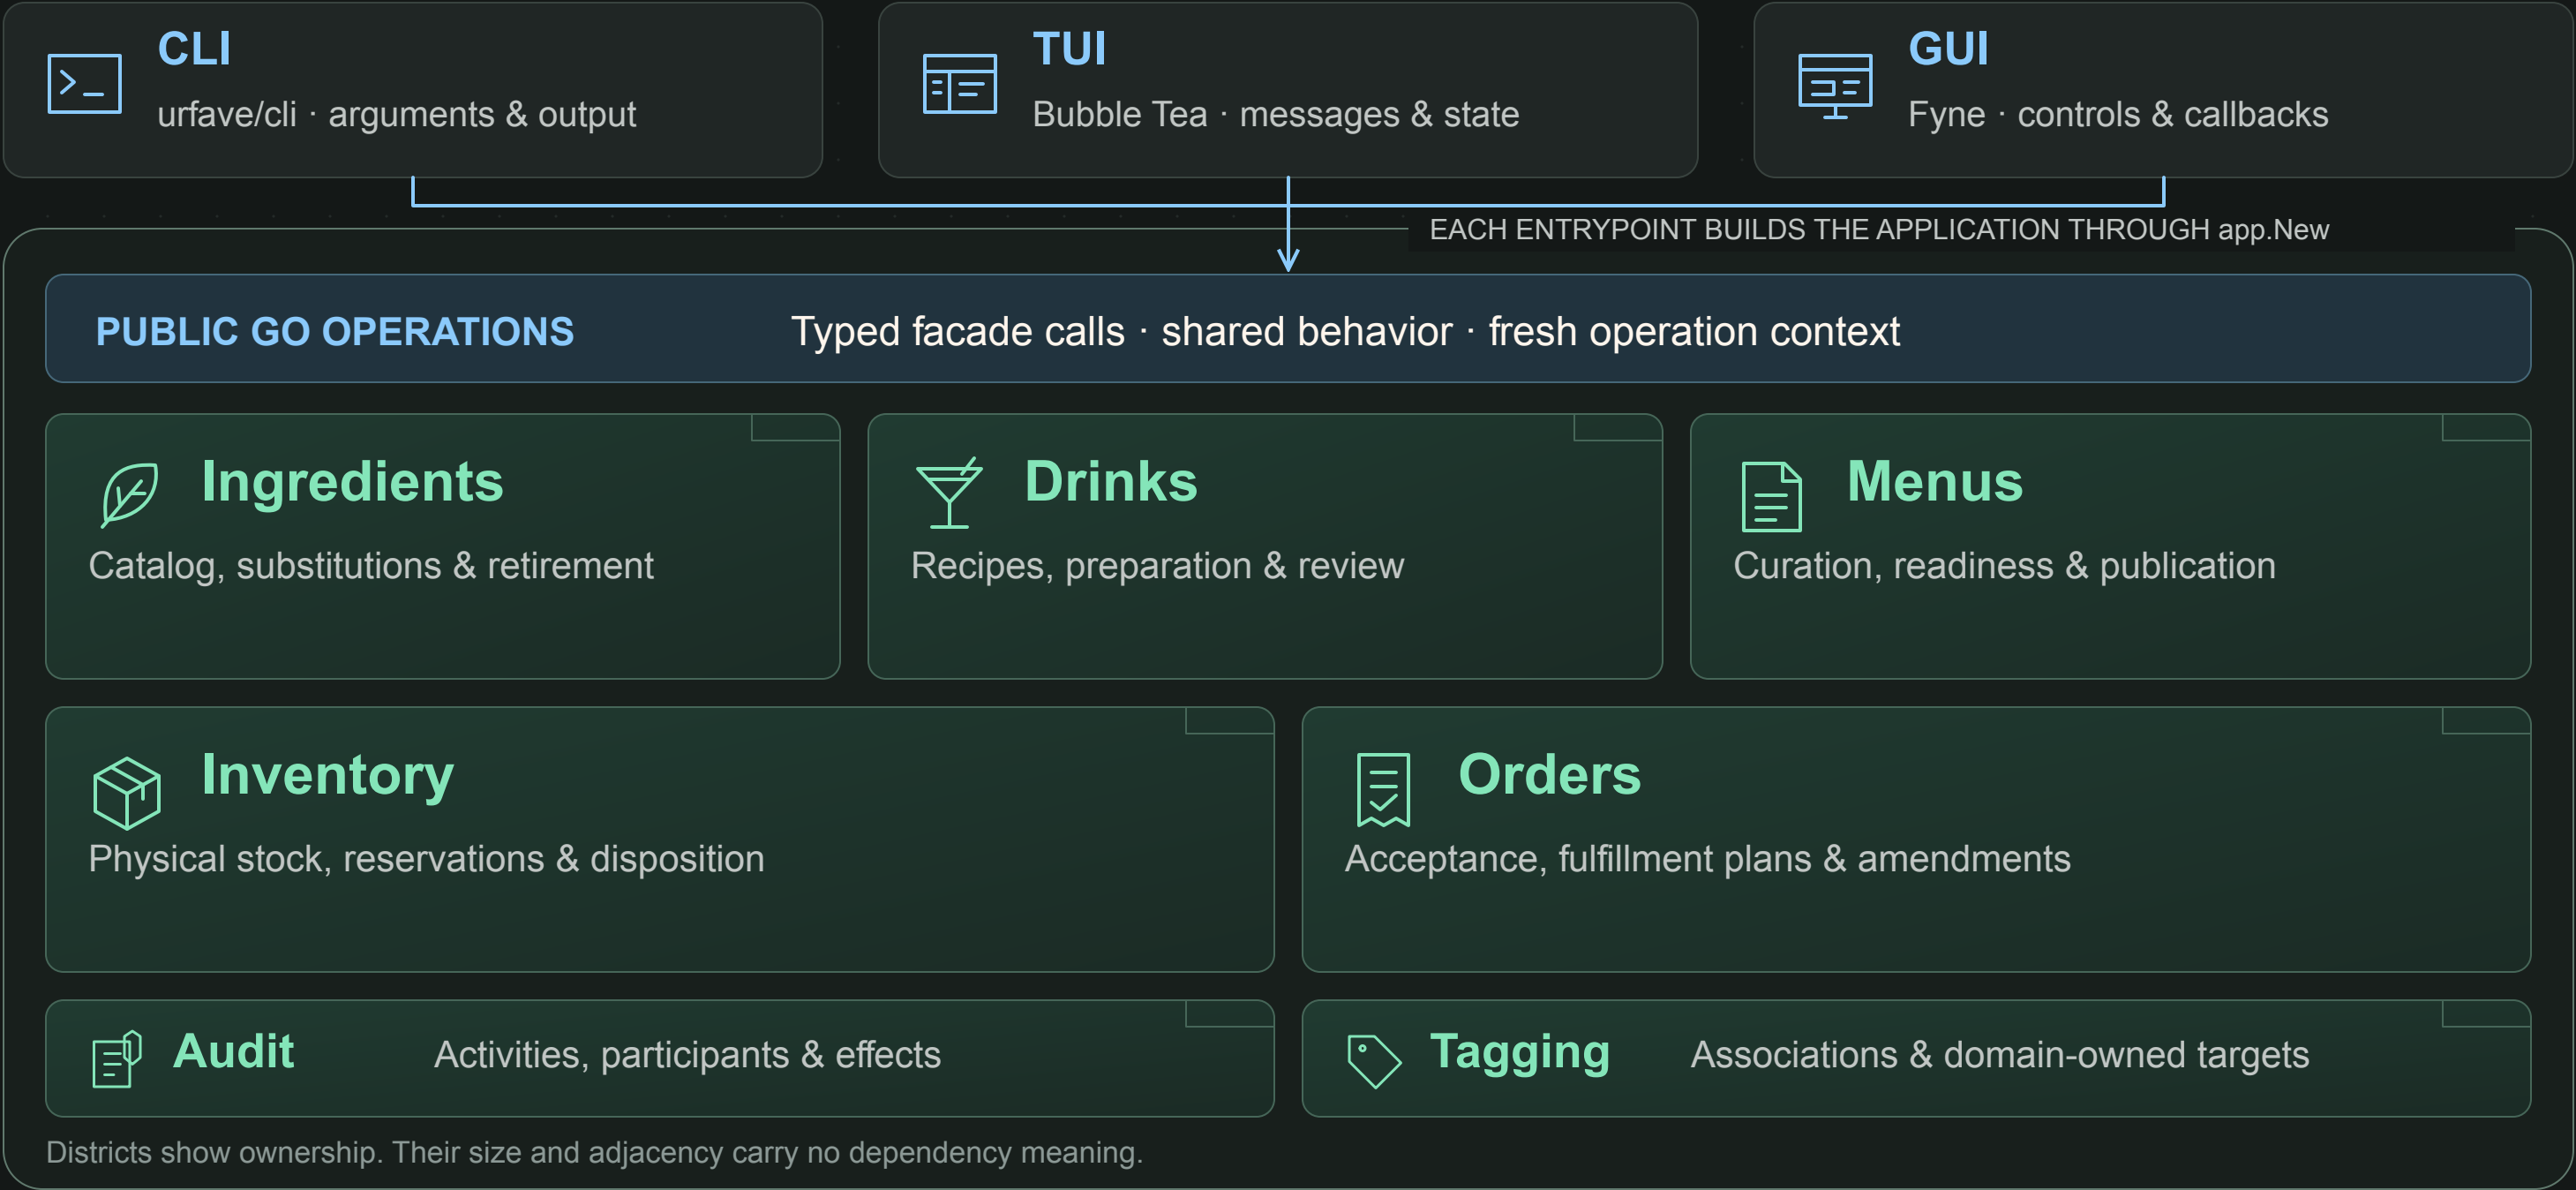

with a Go accent.

A domain-first modular monolith. Clear ownership. Little ceremony.

01 THE TERRITORY

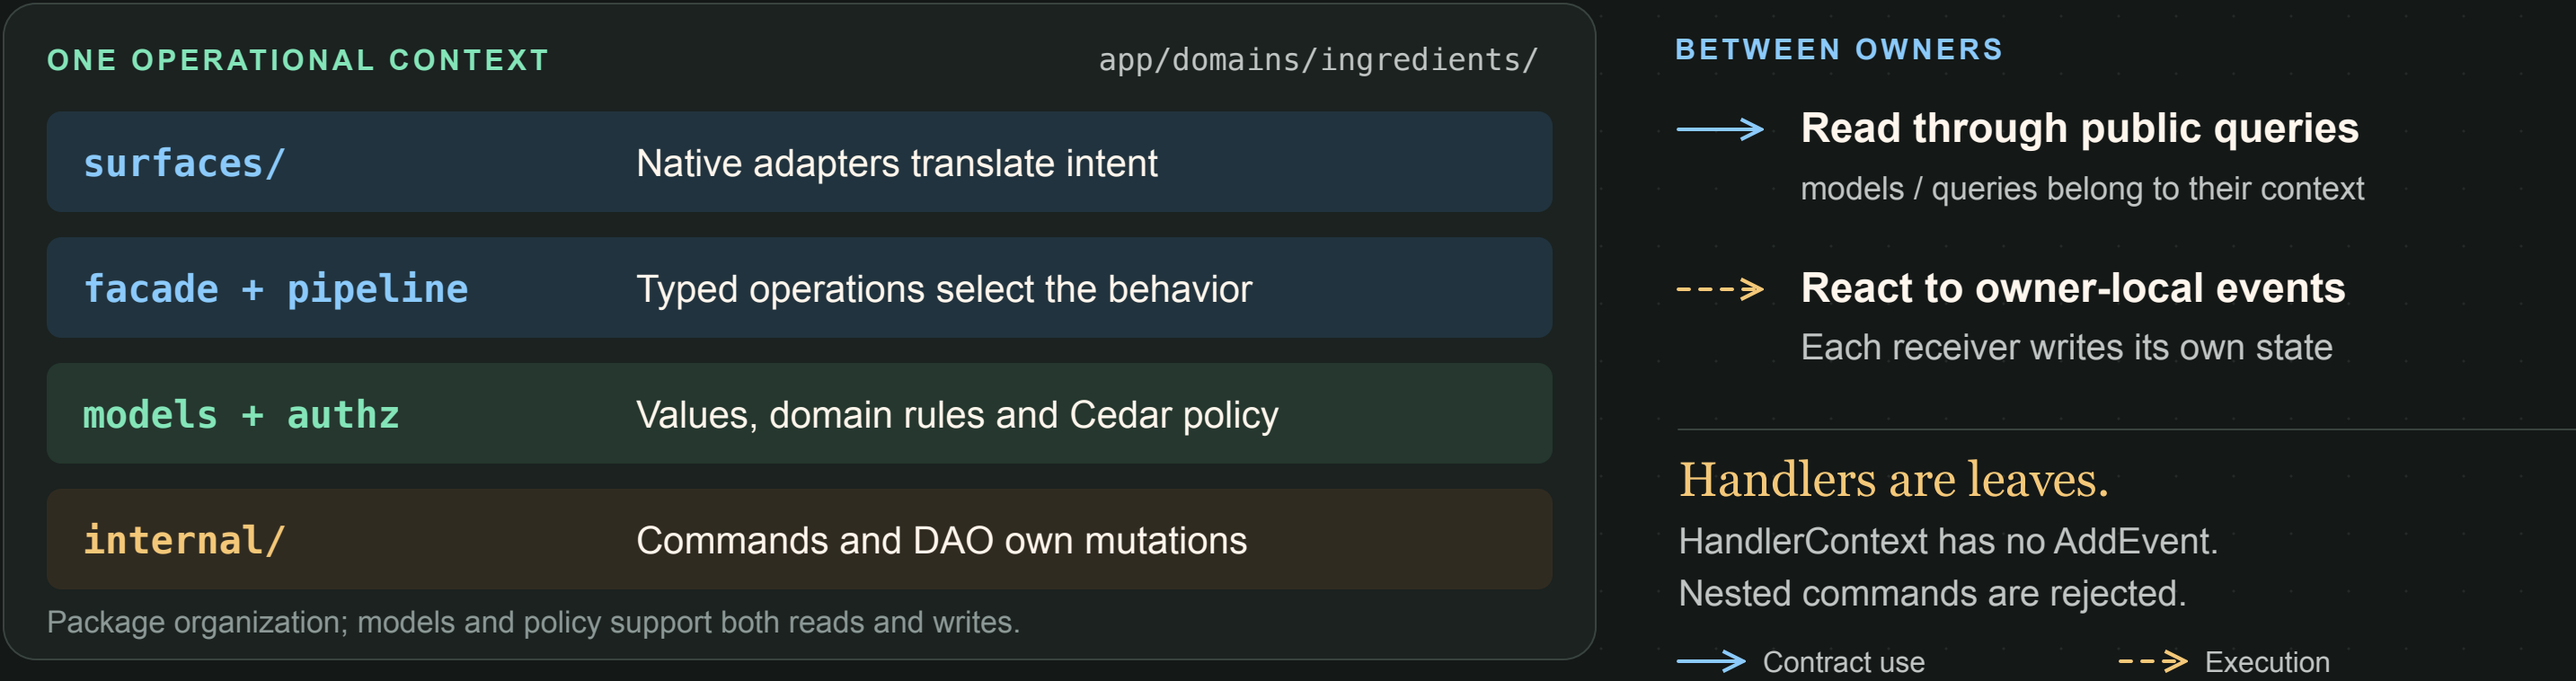

Three entrances. Seven owners.

Every capability keeps its vocabulary, rules, policy, persistence and native adapters close together.

02 THE MODULE BOUNDARY

Public contracts connect. Private writes stay owned.

Public coupling is deliberate. Go internal + arch-lint protect the implementation boundary.

03 THE JOURNEY OF A CHANGE

One domain command. One local commit.

On managed failure: roll back the changes, then audit the failed attempt separately.

SHARED VOCABULARY

Typed IDs · money · units
Small kernel + narrow ports

NAMED MECHANISMS

Store · policy · middleware
`app.New` + generated dispatch

EXECUTABLE BOUNDARIES

Types · internal · arch-lint
Topology + behavioral tests
